What exactly is Candy Crush Saga?

Candy Crush Saga is a free-to-play mobile game created by the studio King. It's a match-three puzzle game similar to Bejeweled in that you swap candy pieces to match three or more of a kind and they disappear, allowing more pieces to fall down.

There are numerous special moves and combinations that the player can use to clear the board and advance to the next level. And there are a LOT of levels. There are currently around 5240 levels in the game, with more being added on a regular basis to keep the most addicted players coming back for more!

This appears to be a fantastic game, but there is a catch, and it comes in the form of "lives." Lives are the number of attempts you have to complete a level. When you run out of lives, you can either wait for them to regenerate over time or ask friends on Facebook to send you some. You can avoid the hassle of waiting or begging by paying real money for more lives.

However, with our Candy Crush Saga Guides and tools, you can avoid the game's tedious grind! There will be no more waiting or begging for more lives. Using our website and tools, you can generate an unlimited number of Extra Lives, Moves, and Gold Bars for free!

How Does Our Candy Crush Saga Hack Work?

We cannot provide specific details on how our tools work in order to protect our generators and services. If we did, we would not only make it easier for developers to fix, effectively killing our tools, but we would also jeopardize our users' security.

The basic idea is that we can send some bytes of data into the game's server/coding via various vulnerabilities. This tiny data stream is virtually untraceable and can easily provide you with an infinite number of free Gold Bars, Extra Lives, and Moves. We call it a "generator" because it generates a packet of data to send that is unique to your account.

No Files or Passwords Required - Our Candy Crush Saga generator does not require any passwords or files to be downloaded in order to function. You simply enter the account name or email address (if necessary), and that's it!

Custom Server Queue - By taking your request and placing it in our queue, this system helps with high traffic and server load. When your turn comes, your request is processed and your items are delivered to the specified account.

256-bit encryption protects your activity on the website and in-game, preventing you from being banned.

Responsive Design entails the ability to use our tools on any device and from any location with an internet connection!
